advanced color image processing pdf

In computer science, digital image processing is the use of computer algorithms to perform image processing on digital images. As a subcategory or field of digital signal processing, digital image processing has many advantages over analog image processing. It allows a much wider range of algorithms to be applied to the input data and can avoid problems such as the build-up of noise and signal ...

Digital paintings are often created by compositing semi-transparent layers using various advanced color-blend modes, such as "color-burn," "multiply," and "screen," which can produce interesting non-linear color effects. We propose a method of decomposing an input image into layers with such advanced color blending.
