To count the number of cells that contain values between two numbers in a range of cells, you can use the COUNTIFS function. In the generic form of the formula (above) range represents a range of cells that contain numbers, X represents the lower boundary, and Y represents the upper boundary of the numbers you want to count. In the example, the active cell contains this formula:

Large numbers are numbers that are significantly larger than those ordinarily used in everyday life, for instance in simple counting or in monetary transactions. The term typically refers to large positive integers, or more generally, large positive real numbers, but it may also be used in other contexts.. Very large numbers often occur in fields such as mathematics, cosmology, cryptography ...

A prime gap is the difference between two successive prime numbers. The  $n$ -th prime gap, denoted  $g_n$  or  $g(p_n)$  is the difference between the  $(n + 1)$ -th and the  $n$ -th prime numbers, i.e.  $p_{n+1} - p_n$ . We have  $g_1 = 1$ ,  $g_2 = g_3 = 2$ , and  $g_4 = 4$ . The sequence  $(g_n)$  of prime gaps has been extensively studied; however, many questions and conjectures remain unanswered. The first 60 prime gaps are:
