Journal Impact Factor: 1.48. ISSN: 2471-8084. Biochemistry and Molecular Biology Journal is an international scholarly, peer reviewed journal presenting original research contributions and scientific advances related to the field of Biochemistry & Molecular Biology.

### **Biochemistry & Molecular Biology Journal - Open Access Journal**

Molecular biology is the study of biology at a molecular level. The field overlaps with other areas of biology, particularly genetics and biochemistry. Molecular biology chiefly concerns itself with understanding the interactions between the various systems of a cell, including the interrelationship of DNA, RNA and protein synthesis and learning how these interactions are regulated.

### **Category: Molecular biology - Wikipedia**

The history of molecular biology begins in the 1930s with the convergence of various, previously distinct biological and physical disciplines: biochemistry, genetics, microbiology, virology and physics. With the hope of understanding life at its most fundamental level, numerous physicists and chemists also took an interest in what would become molecular biology.

### **History of molecular biology - Wikipedia**

MicroRNA 155 (miR-155) is an oncomir, generated as a noncoding RNA from the BIC gene whose promoter activity is mainly controlled via activation protein 1 (AP-1) and NF- $\kappa$ B transcription factors. We found that the expression levels of miR-155 and programmed cell death 4 (Pcd4) exhibit inverse relationships in tongue cancer cells (SAS and AWL) and tumor tissues compared to their relationships ...

Molecular Biology Research Communications (MBRC) is an international pre-reviewed journal. It is published quarterly by Shiraz University. The journal welcomes submission of Original articles, Short communications, Invited review articles, and Letters to the Editor which meets the general criteria of significance and scientific excellence in all fields of molecular biology.

### **Molecular Biology Research Communications (MBRC)**

The Centre for Cellular & Molecular Biology (CCMB) is a premier research organization in frontier areas of modern biology. The objectives of the Centre are to conduct high quality basic research and training in frontier areas of modern biology, and promote centralized national facilities for new and modern techniques in the inter-disciplinary areas of biology.

Biochemistry is the study of chemical processes within and relating to living organisms. By controlling information flow through biochemical signaling and the flow of chemical energy through metabolism, biochemical processes give rise to the

complexity of life.

Application Ethidium bromide (EtBr) is the most commonly used nucleic acid stain for PAGE or agarose gel electrophoresis. The fluorescence of EtBr increases 21-fold upon binding to double-stranded RNA and 25-fold on binding double-stranded DNA so that destaining the background is not necessary with a low stain concentration (10 µg/ml).

The Marion B. Sewer Distinguished Scholarship for Undergraduates is named in honor of Marion Sewer, professor of pharmacology at the University of California, San Diego, and former deputy chair of the ASBMB Minority Affairs Committee. Sewer was a role model for students at all stages and was deeply committed to service within the scientific community.
