The curl of a vector field F , denoted by $\text{curl } F$, or $\nabla \times F$, or $\text{rot } F$, at a point is defined in terms of its projection onto various lines through the point. If n is any unit vector, the projection of the curl of F onto n is defined to be the limiting value of a closed line integral in a plane orthogonal to n divided by the area enclosed, as the path of integration is contracted around ...
