The notion of modular metric spaces being a natural generalization of classical modulars over linear spaces like Lebesgue, Orlicz, Musielak-Orlicz, Lorentz, Orlicz-Lorentz, and Calderon-Lozanovskii spaces was recently introduced. In this paper we

A fuzzy number is a convex, normalized fuzzy set  $\mu$  of real numbers  $(U, \mathcal{F})$  whose membership function is at least segmentally continuous [clarification needed] and has the functional value  $\mu(x) = 1$  at at least one element. Because of the assumed convexity the maximum (of 1) is either an interval: fuzzy interval, its core is a crisp interval (mean interval) with lower bound

A fuzzy concept is a concept of which the boundaries of application can vary considerably according to context or conditions, instead of being fixed once and for all. This means the concept is vague in some way, lacking a fixed, precise meaning, without however being unclear or meaningless altogether. It has a definite meaning, which can be made more precise only through further elaboration ...

Since its launching in 1978, the journal Fuzzy Sets and Systems has been devoted to the international advancement of the theory and application of fuzzy sets and systems. The theory of fuzzy sets now encompasses a well organized corpus of basic notions including (and not restricted to) aggregation operations, a generalized theory of relations, specific measures of information content, a ...

Methods of Comparing Images Compare Program The "compare" program is provided to give you an easy way to compare two similar images, to determine just how 'different' the images are. For example here I have two frames of a animated 'bag', which I then gave to "compare" to highlight the areas where it changed.
